

# BAMBOO COFFEE CUPS

- 100% compostable
- Cups made from bamboo fiber, lids from plant fiber
- Tight lid seal, water resistant
- Suitable for both hot & cold liquids

## TIGHT-SEAL TECHNOLOGY CREATES INDENT TO SEAL LID TO CUP

Our bamboo cups and plant fiber lids are 100% compostable and leak-resistant. Eliminate the billions of cups and lids that end up in landfill each year with this sustainable alternative!

Bamboo is one of the most – if not the most – sustainable materials nature has to offer. It comes from the grass family and grows at a surprisingly fast rate. Farming bamboo retains the natural soil quality and prevents erosion without the need for excess fertilizers. It produces more oxygen and absorbs more carbon dioxide than trees.

Compostable bamboo fiber coffee cups are the more sustainable option to paper cups. Each cup is made from fast-growing bamboo and coated with a minimal amount of bioplastic to allow holding both hot & cold liquids.

Available in bulk cases for Foodservice
